Re: Delta Venturi Orifice Steam Traps

Amlazi Equipment Services, the SA agent and sole supplier of Kannegiesser laundry equipment, have been installing Delta Venturi Orifice Traps on a variety of our equipment for the past 4 years.

The processing equipment that we are successfully running with Delta Venturi Orifice Traps ranges from ironers, garment tunnel finishers and tumble dryers, all over SA. Without exception, all of these processes are far more stable and consistent and we have managed to cut drying times by as much as 40% in some cases.

Our experience is that the consistent discharge principle that the Delta Traps operate on, ensure faster heat up times and accurate temperature control which results in an overall improvement in the laundry process.

In the past, we fitted thermodynamic, ball-float, balanced pressure and inverted bucket traps to our equipment, but found that they didn't last very long and needed regular maintenance. The full stainless steel construction and maintenance-free benefits of your Delta DSV model made the decision easy to standardize on the Delta Trap.

To date, we have not experienced a single problem with Delta traps, and have no hesitation in recommending them to any steam user.

If you require any further information, please do not hesitate to contact me.

Yours faithfully,

Amlazi Equipment Services (Pty) Ltd

Derrick Rothwell
Director
