

Reduce boiler fuel costs and eliminate steam trap maintenance

What we do

In an effort to reduce industrial or production line breakdown caused by the failure of conventional mechanical type steam traps resulting in ongoing maintenance and repairs of these leaking steam traps, Delta Steam Systems have designed a non-consumable steam trap system that carries a standard ten-year guarantee. We are committed to continually developing and refining our product, while intentionally impacting the environment in a positive way through a significant reduction in CO2 emissions, energy consumption and water usage. DSS believe in working closely with clients to address their unique needs.

Latest News

Intern Service Engineers

Delta Steam Systems have partnered with Cape Peninsula University of Technology (CPUT) in an in-service training program. At present we have two junior engineers in our program: Francois Engelbrecht and Lauren Gosling. Both have been with us for three months.

In this short period, they have performed in an exemplary manner and the quality of their report back to their lecturer has been commendable. They described company policy, product knowledge and their contribution and achievements during their time at Delta Steam Systems.

Industry News

Advocates seek to bring industry into energy efficiency conversation.

Factories and other industrial energy users could make significant improvements in energy efficiency, saving money, cutting energy demand and reducing carbon emissions.

What's happening at Delta Steam Systems

Off to Japan

In June our MD, Bryan Anderson attended a successful exhibition at the Propak Asia Industrial Trade Show in Bangkok. Our steam traps drew great interest from the key personnel of some of the largest food and beverage companies in the region. Bryan is currently in Japan meeting distributors and garnering new business.

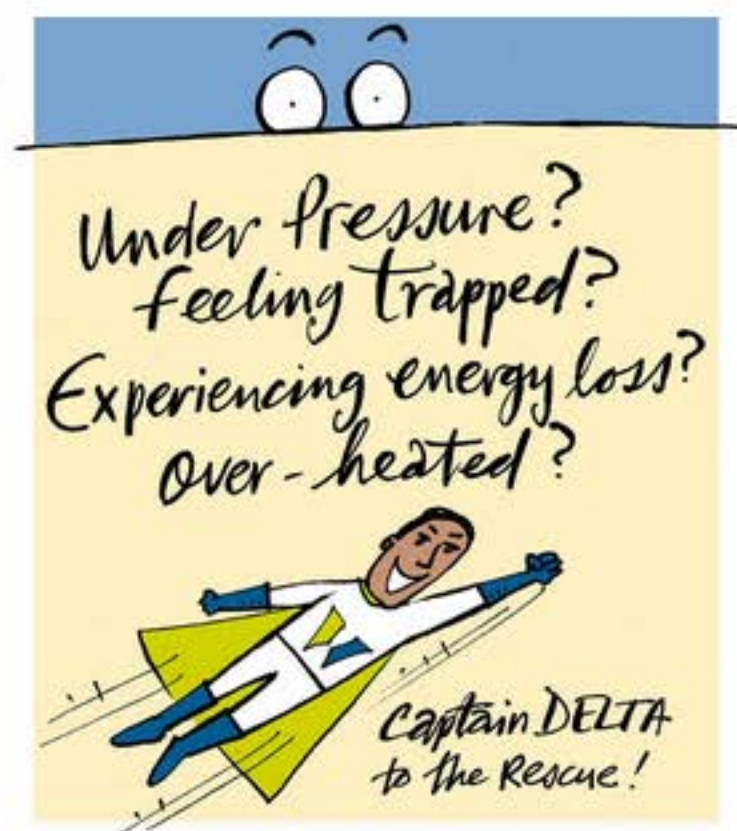

Off to Saudi

Our strong worldwide sales distributor network is built on our active involvement, product knowledge and customer focus. To ensure quality service our Technical Salesperson, Byron Cupido, will be travelling to Saudi Arabia and Kuwait to assist our distributors in the region with sales and training.

New Arrival

We would like to introduce the newest member of our dream team, Jade Buckfield. Jade started with Delta Steam Systems at the beginning of September as our Sales & Marketing Manager and is responsible for the overall leadership of this department
